Aeries Integration

LINQ **Nutrition**

Step 1:

Enabling the Aeries Integration will automatically sync MPW with Aeries based on the Import Frequency selected.

The Base URL is the URL of your Aeries API and the certificate is a 32 character key provided by Aeries.

Step 2:

Match the Aeries field names with the MPW names by selecting an Aeries field from the dropdown list. Only four fields are required for Aeries: **Student Number**, **Last Name**, **First Name** and **Site.**

Step 3:

The Single Student Preview allows you to import a single student into MPW to ensure that all fields have been mapped correctly

Enter a Student's ID and School Code and click preview to preview what everything will be mapped to. If the fields are mapped correctly, click the import button.

Step 4:

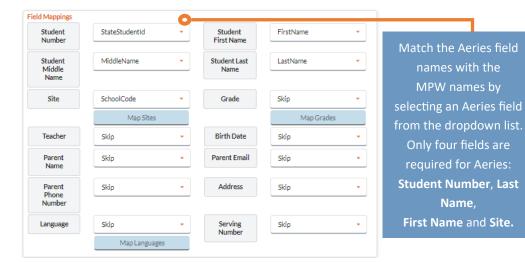

Click the Import button to begin the full Aeries Import. A looping animation will begin.

The results of the import can be viewed in **Utilities: Import Results**.
